

## Meriwether Towers

Portland, OR

JH Kelly provided design-build mechanical and plumbing services for the twin Meriwether Towers in Portland's South Waterfront district. The towers (21 and 24 stories each) sit atop a two-story underground parking structure. The first above ground level houses retail tenants as well as single and two-story townhouses. Above those are approximately 250 condominiums.

We self-performed all of the plumbing, HVAC piping and equipment installation. Also in our scope of services were the water treatment, water and air balancing, and HVAC controls.

**Customer:** Hoffman Construction Company

### Special points of interest:

- LEED Gold Certification
- 250 condominiums plus townhomes and retail space
- Developer: Gerding/Edlen
- Architect: GBD
